44

**13. Calculating** If a particular type of cell completes one cell cycle in 75 minutes, and you start with one cell, how many cells would be present after 7.5 hours?

- **14. Inferring** Many plant cells have more than two complete sets of chromosomes in each cell. Explain how this might occur.
- **15. Comparing and Contrasting** How does an animal cell differ from a plant cell during cell division?

## Chapter 10 Cell Growth and Division

## **Reviewing Key Concepts**

**Short Answer** *On the lines provided, answer the following questions.* 

Class

- **1.** What are the four phases of the cell cycle?
- 2. What happens when the cell copies its chromosomes?
- 3. What happens during cytokinesis?

**Classifying** *On the line provided, label each event with one of the four phases of mitosis in which it occurs. A phase may be used more than once.* 

- \_\_\_\_\_ 4. The chromosomes line up across the middle of the cell.
  - **5.** Chromosomes become visible.
  - \_\_\_\_\_ **6.** Centrioles separate.
  - **7.** Sister chromatids separate into individual chromosomes.
- \_\_\_\_\_ 8. Nuclear envelope re-forms.
  - **9.** The nucleolus disappears and the nuclear envelope breaks down.
  - **10.** Each chromosome is connected to a spindle fiber.
  - **\_\_\_\_\_11.** The individual chromosomes move apart.

## **Reviewing Key Skills**

**12. Applying Concepts** Explain why the terms *cell division* and *mitosis* should not be used interchangeably.
